RECOVERY OF THE GREAT BARRIER REEF 2023

PLANNING CHECKLIST

PLANNING CHECKLIST

IMMEDIATELY

- Make sure you understand and agree to [Earthwatch's Terms and Conditions](#) and the [Participant Code of Conduct](#).
- If you plan to purchase additional travel insurance, note that some policies require purchase at the time your expedition is booked.

6 MONTHS PRIOR TO EXPEDITION

- Log in at earthwatch.org.au/ to complete your participant forms.
- If traveling internationally, make sure your passport is current and, if necessary, obtain a visa for your destination country.
- Bring your level of fitness up to the standards required (see the Project Conditions section).

90 DAYS PRIOR TO EXPEDITION

- Pay any outstanding balance for your expedition.
- Book travel arrangements (see the Travel Planning section for details).
- Make sure you have all the necessary vaccinations for your project site.
- If planning to dive, ensure you have all necessary certifications

60 DAYS PRIOR TO EXPEDITION

- Review the packing list to make sure you have all the clothing, personal supplies, and equipment needed.

30 DAYS PRIOR TO EXPEDITION

- Leave the Earthwatch 24-hour helpline number with a parent, relative, or friend.
- Leave copies of your photo ID and flight reservation number with a parent, relative, or friend.

READ THIS EXPEDITION BRIEFING THOROUGHLY. It provides the most accurate information available at the time of your Earthwatch scientist's project planning, and will likely answer any questions you have about the project. However, please also keep in mind that research requires improvisation, and you may need to be flexible. Research plans evolve in response to new findings, as well as to unpredictable factors such as weather, equipment failure, and travel challenges. To enjoy your expedition to the fullest, remember to expect the unexpected, be tolerant of repetitive tasks, and try to find humor in difficult situations. If there are any major changes in the research plan or field logistics, Earthwatch will make every effort to keep you well informed before you go into the field.

NOTE FROM THE PI

DEAR EARTHWATCHER

Welcome to Recovery of the Great Barrier Reef, which is jointly supported by Earthwatch and James Cook University. We are very pleased to have your involvement in a challenging yet rewarding field of science that will focus on understanding the ecosystem response to proposed reef restoration techniques specifically removal of macroalgae (i.e. sea-weeding), to reduce direct competition and open space for new coral larvae to settle. This project engages the citizen scientists, providing opportunities to learn about the research, gain field skills, and help collect data.

Coral reefs around the world are under increasing threats from direct human activities and global climate shifts, which together are contributing to accelerating rates of reef deterioration. In Australia, the Great Barrier Reef is fundamental to our nation's economy and a national icon that needs to be preserved to ensure ongoing sustainability of our marine resources. Warming seawater temperatures, ocean acidification, and increased freshwater inputs carrying pollutants on to these reefs all impact on the health of corals, the major group of organisms that build the structural framework of coral reefs. Understanding how these environmental stressors cause declining coral health and cover is critical for preventing the loss of coral reefs and an important step towards preserving them for future generations.

This project will be conducted on Magnetic Island, just off the coast of Townsville in the central inshore section of the Great Barrier Reef Marine Park. The island is home to approximately 3000 people, and hence offers excellent facilities for hosting scientists and participants and provides convenient access to surrounding coral reefs.

Research supported by this Earthwatch program focuses on macroalgae, which have come to dominate the inshore reefs around Magnetic Island, and other inshore reefs throughout the Great Barrier Reef Marine Park. While the direct cause of these benthic community shifts has been debated, it is clear that recent pressures necessitate more direct recovery actions for reef conservation and management to be effective in the future. Macroalgal removal has been proposed as an active intervention measure to aid reef recovery, through reduced competition and increased available substrate for coral recruitment. The baseline information on the effects (both positive and negative) of macroalgal removal on reef community structure and ecology have not been rigorously generated however. This Earthwatch project therefore is focused on quantifying the ecological effects of macroalgal removal on reefs surrounding Magnetic Island through assessing abundance of coral and algal taxa, fish assemblages, coral recruitment levels and the photobiology of coral colonies in permanent replicate quadrats with and without active algal removal. In light of current threats to coral reef systems, it is important to investigate the effectiveness of active reef recovery actions. This is where your help is required; we need to provide the scientific evidence to allow reef managers to make decisions on if macroalgal removal is a good or bad idea for improving reef health.

We look forward to meeting and engaging with you in these scientific activities.

Sincerely,

David Bourne

@NATASHA

THE RESEARCH

RECOVERY OF THE GREAT BARRIER REEF

THE STORY

The Great Barrier Reef (GBR) supports one of the most diverse marine ecosystems on the planet and also provides large economic benefits through fisheries, tourism and other marine-related industries. However, a long-term reef-monitoring program has shown that coral cover on the GBR has halved in the last three decades. Some of the largest identified contributors to the decline of GBR corals are storm-derived physical damage, bleaching and disease. Whether coral reefs damaged by severe disturbance events undergo coral recovery (i.e. the restoration of abundance and composition of coral communities) or a phase shift to ecosystems dominated by non-coral organisms (e.g. macroalgae) defines the resilience of coral reefs, and is often influenced by ecological conditions. In addition to researching coral disease, previous Recovery of the Great Barrier Reef expeditions on Orpheus Island has helped to understand the recovery of coral communities after severe disturbance and the underlying mechanism of coral recovery. For example, it has been shown that branching corals are quick to recolonize areas, and that areas of high wave exposure have higher density of new coral colonies following disturbances.

These studies have provided invaluable information on the fine-scale processes involved in the recovery of coral reefs, specifically around the dynamics of coral populations that are essential for determining reef resilience following major disturbance. However, we have moved into an era when repeated disturbance impacts (storms, bleaching, disease outbreaks) have resulted in concerning ongoing declines of reef health globally. Active management intervention has now become a priority for many reef managers, including the Great Barrier Reef Marine Park Authority (GBRMPA). In July 2018, GBRMPA updated its "Reef 2050" plan, the overarching framework for protecting and managing the reef with practical and novel interventions to improve reef health. The baseline information provided by earlier work that established how reefs recover from disturbance can therefore be used to assess the success of any active reef intervention strategy.

Macroalgae flourishes under conditions where terrestrial runoff, increased sedimentation and nutrient loading creates an environment more conducive to macroalgal growth. However, other disturbance events such as storms, mass bleaching, and even reduced herbivory creates space for further opportunistic macroalgae proliferation, thereby additionally reducing the opportunity for coral recovery. These conditions can prompt a shift from a coral to a less desirable macroalgae-dominated regime. Importantly, the return of coral dominance is rare once newly dominant fleshy macroalgae communities have established. While many of the fundamental mechanisms that underpin macroalgae regime shifts have been identified, their persistence and reasoning for why macroalgae regimes are difficult to reverse back to a coral dominated environment are still poorly understood.

The key drivers of coral decline need to be addressed, however active management options offer potential avenues for increasing reef resilience. Macroalgal removal is one such reef recovery method. By increasing space for growth of existing coral colonies and enhancing available space to facilitate coral recruitment, removal of macroalgae has been proposed as one effective local-scale measure to promote reef recovery. Nevertheless, like other active interventions it has been controversial. Advocates of active algal removal argue that the continuing degradation of coral reefs is evidence enough for the failure of current passive management actions. The negative effects of macroalgae on corals have been documented and include shading, physical and chemical recruitment inhibition, and abrasion. The removal of macroalgae has been promoted as reducing these negative impacts on corals. Critics of algal removal argue that intervention can harm reef systems both directly, through physical damage caused by the act of removal, and indirectly, through the potential negative impacts on associated fish and invertebrate species. Indeed, in moderate abundances macroalgae are part of healthy ecosystem function, providing food and shelter for a number of species. This debate highlights that a more comprehensive understanding of the positive and negative effects of macroalgal removal is needed to assess its effectiveness. The impacts of macroalgal removal at Magnetic Island have not been assessed, and this work aims to fill critical knowledge gaps which will further the ability of managers to make decisions regarding these active reef interventions.

RESEARCH AIMS

This project has three themed objectives:

1. To test and develop best practices for macroalgae removal on the Great Barrier Reef;
2. To elucidate the effects of macroalgae removal on corals by assessing changes in coral and algal cover, photobiology and coral recruitment success;
3. To elucidate the effects of macroalgae removal on the abundance and diversity of other reef organisms (i.e. fish and other reef invertebrates).

Considering the increasing incidence of macroalgae on coral reefs due to anthropogenic factors, management strategies based on outcomes from this study will be applicable to reef management agencies worldwide.

HOW YOU WILL HELP

Participants will assist scientists in a number of activities throughout the project and activities can be conducted on snorkel or scuba (or a mix of both) depending on the tide height and participant skills. Planned activities include:

- Establishing replicate quadrats (5X5m) in representative bays around Magnetic Island. This will require fixing star pickets in the hard substrate at sites, marking the sites with underwater buoys and ensuring accurate GPS coordinates and physical maps of the area and plots within the areas.
- Assess the baseline information of abundance of coral, macroalgae, fish and other species within all plots prior to removal of algae.
- Removal of macroalgae from the bottom reef substrate in replicate 5X5m quadrat plots.
- In situ algal height will also be recorded prior to algal removal, and continue in order to evaluate re-growth in treatment plots.
- The whole 5x5m area will be photographed in 1x1m subsections and coral and algal cover will be estimated and monitored for change over the course of the project (for both control and algae removed plots).
- The photobiology of the dominant species of coral colonies will be assessed in each quadrat at each survey time using a diving pulse amplitude fluorometer (PAM).
- Stationary point counts will be conducted to estimate fish diversity and abundance. For each survey the number, species and size of fish observed over 15 minutes will be recorded.
- 'Cryptic crawls' will also be conducted in each plot. Swimming close to the bottom in a grid-like pattern the number, species and size of cryptic and nocturnal species will be recorded.

All underwater photo and video recording of benthic and fish assemblages both pre-and post macroalgae removal are important activities which will require assistance.

NOTE that activities may need to be adjusted depending on weather conditions. Your understanding and cooperation is appreciated.

A range of environmental data will also be collected. For example, to assess if removing macroalgae changes sedimentation dynamics for benthic organisms at the sites, sediment trays will be fastened to the substrate for the duration of the project. Sediment trays will be placed in the control plots, the treatment plots before removal (as macroalgae removal will likely increase displaced sediments) and the treatment plots after removal. In addition, water quality samples will be taken and data loggers recording temperature, will be deployed and retrieved at periods during the study.

WHY FIELD RESEARCH?

As an Earthwatch participant, you will spend a significant amount of time each day assisting scientists with data collection. Some of this work will be repetitive, but it is fundamental to our scientific understanding of nature. Ecosystems are incredibly complex. The only way to begin to unravel this complexity is by designing good experiments, and carefully collecting as much data as possible. Without the work of thousands of dedicated scientists, we would know little about climate change, the effects of pollution, the thinning of the ozone layer, the extinction of species, or how to find cures for diseases or improve crops. Without science we would be blind to the world. This is your chance to be part of the scientific effort, to find solutions to pressing environmental and cultural problems, and to enjoy the beauty and diversity of nature as you work.

DAILY LIFE IN THE FIELD

PLANS FOR YOUR TEAM

TRAINING

This expedition is conducted at the picturesque Magnetic Island near Townsville in Queensland, Australia. Magnetic Island is approximately 12 kilometers offshore from the city of Townsville and accessed via a regular passenger and vehicle ferry. The team will stay in Picnic Bay for ease of access to the research sites around the island including Arthur Bay, and Florence Bay. Before the start of each day's diving activities a toolbox session will be undertaken, to fully explain the aims of the snorkeling and diving activities and how the daily tasks will be performed and achieved. This will include assigning snorkel/dive buddies, work tasks both above and below the water and the expected outcomes.

Any potential hazards or dangers will be discussed especially in relation to updated weather conditions. All participants and project staff will wear full wetsuits, dive booties, fins, snorkel and masks. There will be sun exposure risks for all participants whilst in the field, and many visitors underestimate the strength of the Australian sunshine. High factored waterproof sun block should be worn on exposed areas, and hats should be worn while working outside and above water. During each evening a summary of activities from that day will be undertaken and any problems or issues raised and discussed.

On the first day an overview of the project will be given, providing a brief summary of the goals of the project highlighting the benefits this research can bring to the coral ecology field.

Participants do not need any prior training in research methodologies. All methods, tasks and use of equipment will be outlined and demonstrated at the beginning of the project.

TRANSPORT AND DRIVING POLICY

To comply with COVID Safe planning, participants must get themselves to the start of the expedition on Magnetic Island. This will entail driving yourself via the ferry (<https://magneticislandferries.com.au>) to Magnetic Island, or taking a taxi to the ferry terminal and walking on the ferry as a foot passenger (<https://www.sealinkqld.com.au/ferry>). Earthwatch will be in touch with you to advise of your rendezvous location on Magnetic Island.

If participants have driven themselves to the project, they may not drive whilst on the project. Participants who ignore this policy and do drive or ride in another participant's vehicle during the project will be doing so at their own risk and will not be covered under the Earthwatch nor James Cook University insurance policy for the expedition.

SAFETY BRIEFING

Earthwatch expeditions are conducted in accordance with Queensland Government's COVID Safe Industry Plans, and we have measures in place for the management of activities and participants under COVID-19. All COVID-19 safety measures will be given in a team briefing at the start of the expedition.

Once participants have settled into the accommodation on Magnetic Island, a further project and safety briefing will be conducted in the common room at the accommodation. This briefing will specifically highlight any safety issues on the Island and sort out basic operating procedures including timetables for cooking, cleaning and planned field activities.

GENERAL SNORKEL AND DIVE PROCEDURES

Snorkelling and diving on this expedition carries an inherent risk. Safety procedures are established to minimise these risks and should be adhered to closely. Minimum levels of competence are required for both snorkellers and divers (ref p14) and only participants who meet the minimum health, proficiency and (for divers) qualification set will be able to participate in these activities. In line with these minimum proficiency standards, the research team relies on all scuba divers and snorkellers to be responsible for their own safety and aid others in case of an emergency.

James Cook University and the research team leading the field activities have the right to exclude anyone from participating in snorkel and dive activities if they fail their checkout snorkel or dive, snorkel or dive unsafely, or place themselves or others in a situation of undue risk.

ITINERARY AND DAILY SCHEDULE

Weather and research needs can lead to changes in the daily schedule. We appreciate your cooperation and understanding.

DAY 1 ARRIVAL/TRAVEL DAY

12:00 p.m.	• Meet expedition team in Townsville
12:00 p.m. – 3:00 p.m.	• Travel to Magnetic Island • Settle in accommodation • Safety briefing and orientation
Afternoon	Organization of research equipment and dive/snorkel gear
Late afternoon	Preliminary dive/snorkel to assess ability of all participants—area near the accommodation
6:00 p.m.–7:30 p.m.	Dinner

DAYS 2–4 FIELDWORK DAYS

7:00 a.m.–8:00 a.m.	Breakfast
8:00 a.m.–9:00 a.m.	• Morning brief on the day's activities • Outline the aims for the field-based activities for that day. • Prepare all equipment and supplies and load the boats in preparation for leaving.
9:00 a.m.–9:30 a.m.	Travel to the site for that day.
9:30 a.m.– 4:00 p.m.	• Undertake the day's field activities, which will usually include 2 x 90 minute snorkels/dives with more than 1-hour surface interval. • Lunch taken between dives.
4:00 p.m.–5:00 p.m.	• Return to accommodation • Wash all gear, clean required equipment and fill scuba tanks for the next day
5:00 p.m.–6:00 p.m.	Free time for showers, personal activities
6:00 p.m.–7:30 p.m.	Dinnertime
7:30 p.m.–8:30 p.m.	Summary of the day's activities plus a scientific talk on relevant marine topics.

DAY 5 TRAVEL DAY

Morning	Breakfast, pack and tidy up and depart Magnetic Island and return to Townsville.
---------	--

ACCOMMODATION AND FOOD

ABOUT YOUR HOME IN THE FIELD

Participants will stay at a beachfront holiday home in Magnetic Island. Participants will have access to the kitchen and recreational facilities offered there (e.g. swimming pool).

SLEEPING

Rooms are shared; gender segregated. To comply with COVID Safe regulations, any shared room will have beds spaced 2m apart. Those requesting a single room can do so at no extra cost, however the location may vary based on demand. Couple room requests can be accommodated depending on the available space at the holiday home.

Each room is equipped with a ceiling fan, air conditioner, and has screened windows. Bed linen (flat and fitted sheet, pillow and pillowcase are provided). Participants on Team 2 (July) may encounter cooler overnight temperatures, and so a blanket/sleeping bag (appropriate for the temperatures encountered) may be required depending on how cool you feel at night.

BATHROOMS

There are 4 bathrooms throughout the house. These shared facilities offer hot water showers and toilets. Participants may wish to bring a pair of sandals for the shower.

ELECTRICITY

There is 24-hour electricity and all rooms are equipped with working power sockets. Participants are asked to conserve energy wherever possible to help conserve power consumption. Additionally, due to changes in load demand, this may result in low level surges in the power supply. It is recommended that if visitors are using sensitive electronic equipment to bring surge protection boards.

PERSONAL COMMUNICATIONS

There is no Wi-Fi at the accommodation, neither desktop internet nor computers so participants will have to bring their own laptop and Wi-Fi dongles should they wish or need to use the internet during the expedition. Mobile phone reception is widely available on Magnetic Island. Telstra Mobile tends to have the best coverage in Australia. Communication between teams of participants on-site will be via VHF radio.

FACILITIES AND AMENITIES

Magnetic Island is home to ~3000 people, and so the island has shops and amenities available to participants however not all accommodation options are within walking distance of these facilities. In addition, variety and supply may be limited, so participants who require any specialty items (dietary, personal), are recommended to bring them and not expect that they will be available on the island.

DISTANCE TO THE FIELD SITE

Participants will be transported to the field locations, and the furthest distance between sites is ~8 km by land. All sites are within the bays of Magnetic Island and so accessible from shore. A boat will provide support for in water activities, though this will depend on what activities are planned for the day/season.

FOOD AND WATER

Earthwatch will provide all food during your stay at the research site.

Participants and staff will be responsible for making their own continental breakfasts in the morning.

Lunch will be had in the field, and participants and project staff will be expected to make their own sandwiches in the morning before departing. Fruit and snack foods (e.g., muesli bars) will be available to pack as well.

Dinner will be a cooked meal and all participants will be expected to participate in the preparation of meals according to a roster. Be prepared to have a little fun with this! The Principal Investigator organizes a friendly "master chef" style competition from the cooking roster, and many participants enjoy this wholeheartedly. Evening meals will be hearty and comprise meats, vegetables, pasta, rice etc. BBQs will be planned but will be dependent on the weather. There will also be one night out at the Arcadia Bay pub for dinner, where meal costs will be covered but any alcoholic beverages will be at participants own cost. This will be to partake in the local tradition of cane toad racing!

Housekeeping will be shared, with small teams assigned to duties each day. Tasks may include washing and drying dishes, sweeping the kitchen floor, wiping benches, cleaning the bathroom, packing away chairs and tables after meals etc. A roster with full tasks will be established on the first day of the project.

Fresh drinking water will always be available at the accommodation quarters. Magnetic Island is supplied with treated potable town water and is suitable for drinking without treatment. Water should not be wasted however as the Island is in the dry tropics.

Tea and coffee will also be readily available at the accommodation.

The following are examples of foods you may find in the field. Variety depends on availability. We appreciate your flexibility.

TYPICAL MEALS

BREAKFAST	Cereal, toast and spreads.
LUNCH	Sandwich meats, spreads and salads, cheese, fresh fruit, muesli bars.
DINNER	Pasta, curries, stir-fry, BBQ meat and salads, sauces, etc.
SNACKS	Crackers, fruits, sweet biscuits, muesli bars.
BEVERAGES	Coffee, tea, milk, fruit juices / cordial, water.

SPECIAL DIETARY REQUIREMENTS

Please alert Earthwatch to any special dietary requirements (e.g., diabetes, lactose intolerance, nut or other food allergies, vegetarian or vegan diets) as soon as possible, and note them in the space provided on your participant forms.

Accommodating special diets is not guaranteed and can be very difficult due to availability of food, location of field sites, and other local conditions.

PROJECT CONDITIONS

THE FIELD ENVIRONMENT

The climate at Magnetic Island is tropical, with the summer (November to April) hot and humid with temperatures in the high 20s°C (mid 80s°F). The rainy months are from December to March with an average annual rainfall of 1200mm (3.9 ft.). Summer winds are variable, with extended calm periods. Cyclones developing in the Coral Sea (November to May) may produce strong winds and heavy rains, but rarely threaten the island. Southeast trade winds dominate the cool, sunny, dry season from June to November. During this period daily temperatures may be variable and a range of attire is recommended with overnight temperatures dropping to 20° Celsius.

Water temperatures range from 25 to 27° Celsius (82 to 86° Fahrenheit) in summer and can drop as low as 23° Celsius (75° Fahrenheit) in winter. Please note: these provided climate condition predictions are general in nature and teams have experienced unseasonable weather at all times of year.

GENERAL CONDITIONS			
	APRIL	JULY	OCTOBER
HUMIDITY	65%	62%	67%
TEMPERATURE RANGE	22-28° C / 72-82° F	15-24° C / 55-75° F	20-30° C / 68-85° F
AVERAGE RAINFALL	61mm/ 2.6 inches	20mm/ 0.5 inches	35mm/ 1.1 inches
ALTITUDE	Sea level	Sea level	Sea level

WATER CONDITIONS			
	APRIL	JULY	OCTOBER
TYPICAL WATER TEMPERATURE AT WORKING DEPTHS:	27°C / 81°F	22°C / 72°F	24°C / 75°F
TYPICAL WATER VISIBILITY:	2-10m / 6.6-33 ft., variable based on winds and season		
TYPICAL MAXIMUM WATER DEPTH (BOTTOM DEPTH) IN AREA:	3-10m / 9.8-33.4 ft.		
SITE DIVING TYPE:	Fringing Reef		
ANTICIPATED DEPTH OF DIVES:	3-10m / 9.8-33 ft.		
ANTICIPATED NUMBER OF DIVES PER DAY:	2-3		
DIVES INITIATED FROM:	Shore and Boats		
TIMING OF DIVES:	During the day		
ACCESS AND EGRESS INTO/FROM WATER	From shore or by boat		
DIVING BOTTOM LIMIT (20M/65FT IS MAX. UNDER EARTHWATCH POLICY):	10m/ 33ft		

ESSENTIAL ELIGIBILITY REQUIREMENTS:

PHYSICAL DEMANDS: The project can be very physically demanding. You will be working on water with strong currents and sea swell. Those who are prone to seasickness should bring preventative treatments with them.

EXPECTED DEMANDS OF THE PROJECT: Please keep in mind that conditions may change and the project could potentially be more or less strenuous than these points indicate.

All participants must be able to:

- Follow verbal and/or visual instructions independently or with the assistance of a companion.
- Enjoy being outdoors all day in all types of weather, in the potential presence of wild animals and insects.
- Swim, snorkel or dive twice a day for 90 minutes at a time.
- Sit for 2–3 hours per day (travel via vehicle or boat, evening lectures).
- Walk some distance over rough terrain (up to 1 km) to access research sites (the bays may be away from the roads).
- Carry their own snorkel or dive equipment to and from the boat and/or shore and may be asked to help carry research equipment. The distance differs according to the tide level and boat support for the activities, and it may be in shallow water (up to 50 cm).
- Be active, including regular bending and lifting, when doing field work and cleaning field gear.
- Work on a boat for 4–6 hours a day. Travel to some research sites may be via boat and take no longer than 30 minutes. At least one hour surface time will be spent between dives, either on the boat or on shore, depending on weather conditions.
- Adhere to the briefing guidelines, be aware of their limitations and apply common sense while participating.

BOATING REQUIREMENTS

In order to assist on the research boat, you will need to be relatively fit and agile. Although research boats may have a canopy for shading, sun protection is required for the one-hour surface interval and other field activities. Depending on winds, the trip may be bumpy and participants may feel cold on the return trip after being in the water all day. An all-weather proof or windbreaker jacket is advisable.

MEDICAL FITNESS

All participants must be in good physical condition. Individuals with any medical condition that may impact on their safety in the water will be required to provide a medical clearance from their doctor dated within 12 months of the start date of the project stating they are fit to conduct the tasks outlined in this briefing. Certified divers are required to provide their most recent dive medical provided it was undertaken less than 12 months prior to the start date of the expedition.

SNORKELLING

Snorkelers should have more than 10 hours snorkelling experience in open water and be able to demonstrate basic snorkel skills including correct mask clearing, ear equalisation and duck diving. Snorkelers should be comfortable swimming in the open ocean with swells and strong currents, able to swim or tread water for 10 minutes continuously and swim at least 200m (650ft) unaided. Snorkelers must be able to demonstrate full control over their breathing at all times.

SCUBA DIVING

To dive on this expedition participants will need to meet the requirements to join the James Cook University Dive Register. At a minimum you will need to hold a Divemaster or Australian Occupational/AQF Rescue Dive Certification as well as other relevant certifications, medical clearance and demonstrable experience (see list below). Divers will need to provide all relevant documentation and have this validated by the JCU team via upload to the register prior to joining the expedition. All divers must ensure they meet, understand and adhere to all safety procedures, environmental rules and regulations, and safe diving limits.

Check Documentation Requirements for Scuba Divers

Check	Documentation Requirements for Scuba Divers
	Dive Qualifications
<input type="checkbox"/>	Internationally recognised Divemaster or higher; OR Australian recognised Occupational diver qualification (AS2815); OR SISOSCB006 "Perform Diver Rescues" recognised under the Australian Qualifications Framework or higher
<input type="checkbox"/>	First Aid Certificate (most are valid for 36 months)
<input type="checkbox"/>	CPR and O2 provider certificates (current within 12 months)
<input type="checkbox"/>	Occupational Dive Medical Certificate stating Australian Standard AS/NZS 2299.1:2015 undertaken within the previous 12 months.
<input type="checkbox"/>	Dive log book, validating a minimum of 40+ hours underwater experience
<input type="checkbox"/>	DAN insurance

DIVE MEDICALS

All divers must hold a current Occupational Dive Medical provided by a certified South Pacific Underwater Medicine Society (SPUMS) Dive Examiner or equivalent from Undersea and Hyperbaric Medical Society (UHMS) certified doctors. This dive medical must state it is conducted to the Australian Standard AS/NZS 2299.1:2015 and have been undertaken less than 12 months prior to the start of the expedition. If you are unable to see a SPUMS or UHMS registered doctor before your arrival in Australia, you in need to organise an appointment in Australia prior to joining the expedition. This medical should be booked well in advance and you will need to arrive in Australia at least one day early to complete this assessment. You will be required to have a chest x-ray and you will need to bring your x-ray and x-ray report (in English) with you. The full cost of the dive medical will vary between doctors and you will need to pay in full on the day of medical assessment.

You can find a doctor able to provide Occupation Dive Medicals via the SPUMS Diving Doctors List spums.org.au (select "yes" under OCC Diving).

DIVE LOGS

You will be required to provide a copy of your Dive Log Book, with dives countersigned, validating a minimum experience of 40+hrs underwater excluding training dives. You must have logged at least one dive in the last six months prior to the start date of the project and in water similar to those of the planned dive (e.g. temperature).

DIVE INSURANCE

Hold dive insurance, which provides emergency evacuation service as well as accident treatment cover. DAN dive insurance or equivalent (stating what type of coverage is provided eg Standard, Preferred or Master). See danasiapacific.org/index.php. *note: holding a DAN membership does not mean that you have a DAN insurance policy, you must have membership however to purchase insurance.

DIVE GEAR

If you intend to use your own scuba diving equipment, it must have been serviced within 12 months prior to diving and will be inspected by the JCU Dive Supervisor prior to diving. Evidence to show that the equipment test is current (i.e. service record from the service shop) will be required.

For further information on the expeditions dive requirements, please contact the Earthwatch Australia Office: +61 (0) 3 9016 7590 or earth@earthwatch.org.au.

POTENTIAL HAZARDS

HAZARD TYPE	ASSOCIATED RISKS AND PRECAUTIONS
Transportation	Some driving may involve rough roads on 4WD tracks. All vehicles are equipped with airbags, seatbelts, spare tires, first aid kit with Emergency Response Plan and mobile phone. Only experienced and suitably qualified project staff will drive vehicles and they will obey all road rules. Passengers and driver will be instructed to wear seat belts at all times whilst the vehicle is in motion. Participants are not allowed to drive (including their own vehicles) while on an Earthwatch team.
Working in boats	Boats are well maintained, and include VHF radio, life preservers, emergency flares, fire extinguisher, and a first aid kit. Life jackets are available for all passengers. All participants and project staff will be wearing wetsuits, which assist with buoyancy. All participants must be able to swim, and must disclose their swimming ability to project staff in advance. The boat is only used in daylight hours and only when sea state is acceptable to the skipper. The skipper is certified and experienced in driving boats in the area. Boat communications include EPIRB, flares, VHF radio and mobile phones. There is a communications plan with the team outlining boat return time, destination and people manifest.
Slips and Trips	Participants may need to board the boat by the boat ramp or by walking out onto the beach to the closest point where the boat can get in due to tides. Participants are instructed to be careful when embarking and disembarking the vessel and should hold onto the handrail or sides of boat. Participants should always wear their booties when walking out on the reef and boarding the boat.
Snorkelling	Snorkelling is a physically demanding activity with inherent risks. Safety procedures are established to minimize the risk associated with snorkeling and outlined during the safety briefing prior to commencing the research activities. Snorkels are to use the appropriate technique to equalize as they duck-dive to avoid eardrum injuries and ensure they know how to use the snorkeling equipment (including how to clear masks and snorkel, appropriate techniques for fin use, and outline some tips on safe breath holding).
Diving	Scuba diving is a physically demanding activity with inherent risks. Safety procedures are established to minimize the risk associated with diving and should be adhered to closely. As with all diving activities there is a risk of decompression illness (DCI). There isn't a recompression chamber on the island; therefore, there will be strict diving restrictions imposed. Only participants who have passed a dive medical, have appropriate insurance, and have provided evidence of significant dive experience can participate on Earthwatch dive projects. A Dive Supervisor is always present with divers. Oxygen is kept on board the boat. Project staff are first aid qualified. Participants are buddied up based on experience. Participants are guided down and up slowly in order to prevent descending and ascending too quickly. There is a diver response plan in place.
Poisonous and stinging marine animals	There is potential for participants or staff to be stung or bitten by some species of marine life present (for example stonefish, sea snakes, stingrays, and various jellyfish). Participants should wear wetsuits, flippers and mask, which will provide protection from most stinging wildlife. Participants are instructed not to pick anything up or touch any marine creatures. If participants are stung they should alert project staff and apply first aid according to what has caused the sting. Participants should wear booties or some closed footwear when walking in the water and shallow reefs in the bay.
Sharks/Crocodiles	There is low risk of encountering a dangerous shark or a crocodile on the project. If a shark or crocodile is present nearby and advance warning has been given to the team via the local authorities, then research activities will be cancelled in that location. Sharks will most likely demonstrate aggressive behavior before they strike, however, crocodiles are known to be 'ambush predators', and so precautions will be taken when near the water (when not on scuba) if a crocodile is known to be present in the area. If a shark is spotted and displaying aggressive behavior, all participants will evacuate the water as quickly as possible.
Heat related illnesses, dehydration	Participants should bring reef-safe waterproof sunscreen. Participants should drink plenty of water throughout the day. If participants start to feel unwell they should notify a project staff member immediately and rest in a shaded area, whilst cooling themselves with water.
Coral rubble and sharp shells	Participants should not go barefoot when walking around the accommodation or when walking out on the reef.
Gas stove	Participants will be cooking on gas stoves and the risk of burns is possible. Participants will be briefed about the cooking facilities and warned to take care when using any gas elements.
Snakes	Venomous snakes are found on the island. If participants come across a snake, they should not try to catch it or kill it. Participants should back away from the snake and let it be. Participants will be briefed on snakes on arrival and advised to wear closed in shoes when walking around the island.
Health	Due to the COVID-19 pandemic, participants must be spatially distant at all times where possible, cough or sneeze into a tissue or elbow, and maintain strict hand hygiene. Sharing of personal equipment will not be permitted. Ample hand hygiene and cleaning supplies will be provided on the expedition. A COVID Safe plan is in place should anyone display signs or symptoms consistent with suspected COVID-19 illness.

HEALTH & SAFETY

RECOVERY OF THE GREAT BARRIER REEF

EMERGENCIES IN THE FIELD

The Day 1 trip safety briefing will detail the expedition process to manage emergencies in the field. There is an ambulance (paramedic) service on Magnetic Island, in addition to a medical centre and pharmacy within 25 minutes drive of all activities. A hospital is located in Townsville, approximately 40 minutes away via public ferry (boat). For serious injuries we will be guided by the advice of the ambulance service.

For emergency assistance in the field, please contact Earthwatch's 24-hour emergency hotline number on the last page of this briefing. Earthwatch is available to assist you 24 hours a day, seven days a week; someone is always on call to respond to messages that come into our live answering service.

PROXIMITY TO MEDICAL CARE

PHYSICIAN, NURSE, OR EMT ON STAFF: Project staff are not medical professionals.

STAFF CERTIFIED IN SAFETY TRAINING: All James Cook University team members are qualified in CPR and hold a First Aid / oxygen provider certificate. All Earthwatch Team Leaders are qualified in CPR and hold a First Aid certificate.

NEAREST MEDICAL TREATMENT

MAGNETIC ISLAND HEALTH SERVICE CENTRE

offers nurse-led clinics
76 Sooning Street, Nelly Bay
Magnetic Island 4819 Queensland
+61 (0)7 4778 5107
Located in Nelly Bay near the project site.

LATITUDE 19 HEALTH

68 Sooning Street, Nelly Bay
Magnetic Island 4819 Queensland
+61 (0)7 4778 5614

THE TOWNSVILLE HOSPITAL

100 Angus Smith Drive
Douglas, QLD 4814
Mailing Address: P.O. Box 670, Townsville QLD 4810
Telephone: (within Australia) (07) 4433 1111
(International) +61 7 4433 1111

Travel time from project: 15 km/40 minutes by boat and ambulance

ROUTINE IMMUNISATIONS

We recommend all volunteers have the following up-to-date immunisations: DPT (diphtheria, pertussis, tetanus or tetanus booster if required), polio, MMR (measles, mumps, rubella), and varicella (if you have not already had chicken pox).

COVID-19 vaccinations: All participants must be fully vaccinated against COVID-19 in line with Australian Government Regulations or medically exempt. All participants will be required to verify their status.

MEDICAL CONDITIONS OF SPECIAL CONCERN

Hydrophobia, discomfort in or around boats; uncontrolled inner ear infections, conditions that reduce or limit your ability to equalize pressure in one's ears; conditions that affect balance, blood clotting issues and/or any condition that interferes with or limits a participants' swimming or breathing should be considered carefully. If you are pregnant, you should inform your doctor prior to diving. If you suffer from motion or seasickness and intend to treat this with either over-the-counter or prescribed medication, please discuss the use and side effects with your doctor.

CONDITION CONCERNS AND PRECAUTIONS

Medical Complaints	Due to the remoteness of the area and the time it takes to evacuate, those who may require quick access to medical care due to any medical complaints should not take part on this project.
Allergies	Those with known allergies to dust, grasses, mammals, plants or insects (including mosquitoes and sand-flies) should bring appropriate medications in order to participate on this project. Those with severe allergies with a history or potential for anaphylaxis should bring an EpiPen and carry it with them at all times.
Back or neck problems	Those with chronic or constant back or neck pain should be aware that some days may require travelling on the boat in bumpy conditions and should reconsider their ability to participate.
Knee or ankle problems	This project requires bending and lifting as well as participants to walk over uneven and steep terrain.
Physical limitations	Participants with physical limitations should be aware that the work involved generally requires a good level of fitness.

NOTE: Any prescription medication brought into Australia needs to be accompanied with a letter from your doctor for Customs Inspection purposes.

TRAVEL TIPS

SUGGESTIONS FOR THE ROAD

YOUR DESTINATION

LANGUAGE: English

TIME ZONE: GMT/UTC +10 hours

LOCAL CURRENCY: Australian Dollar

PERSONAL FUNDS: No funds are required for the expedition, however participants may wish to take some cash (AUD\$) with them to buy snacks and beverages. For those traveling from overseas, airports and most major towns will offer banks and/or ATM's for cash withdrawals (please check with your bank beforehand to see if your cards are compatible with Australian ATMs). In most locations you can use EFTPOS or credit cards for large purchases but smaller purchases are typically paid for with cash.

Please also check with your bank in regards to accessing your money within Australia. You may require additional funds while traveling before/after your expedition—MasterCard and Visa are widely accepted throughout Australia; however cash is preferred for small purchases.

COUNTRY AND PROJECT ENTRY REQUIREMENTS

Entry visa requirements differ by country of origin, layover, and destination, and do change unexpectedly. For this reason, please confirm your visa requirements at the time of booking and, again, 90 days prior to travel. Please apply early for your visa (we recommend starting 6 months prior to the start of your expedition). Refunds will not be made for participants cancelling due to not obtaining their visa in time to meet the team at the rendezvous. You can find up to date visa requirements via the following site:

www.travisa.com

If a visa is required, participants should apply for a TOURIST visa. In most cases, this can be done online through Australia's Electronic Travel Authority. For more information, please see: <https://immi.homeaffairs.gov.au/visas/getting-a-visa/visa-listing/electronic-travel-authority-601>

Generally, passports must be valid for at least six months from the date of entry and a return ticket is required.

CONTACT INFORMATION

You may be required to list the following contact information on your visa application and immigration form, or if your luggage does not make it to baggage claim at your destination:

Elizabeth Irvine, Program Operations Manager

Suite G-06, 60 Leicester St

Carlton VIC 3053

Australia

Email: earth@earthwatch.org.au

Ph.: +61 (0) 3 9016 7590

TRAVEL PLANNING

RENDEZVOUS AND DEPARTURE INFORMATION

RENDEZVOUS

LOCATION: C Bar, The Strand (corner of Gregory Street),
Townsville, Queensland

DATE:

Team 1: 01-05 May 2023

Team 2: 10-14 July 2023

Team 3: 16-20 October 2023

TIME: 12:00 pm on Day 1

HOW TO MEET YOUR TEAM

C Bar is located at the end of Gregory Street Headland on the Strand. It is directly across from Juliette's Coffee, which is located at 58 The Strand, on the corner of Gregory Street and The Strand. Participants will meet at 12:00 pm. on Day 1 of the expedition on the grass out front of C Bar. The Earthwatch scientists and team leaders will be there to meet you. From here, participants will travel via mini bus to the Magnetic Island ferry terminal, for transfer to Magnetic Island. To get to the C Bar from the airport you can take a taxi, which will cost approximately \$20.

Although Earthwatch can often suggest resources to help with travel planning, please remember that you are responsible for making your own travel arrangements to the rendezvous site and that airline information is subject to change. You are encouraged to register your travel itinerary with your embassy.

It is essential to the success of the expedition that you do not plan to arrive late or leave the expedition early.

ARRIVING EARLY

If you do choose to arrive in Townsville prior to the rendezvous, there are many sites and activities to keep you busy. There are a number of accommodation options located very close by the rendezvous site. The Strand in Townsville offers a wide range of accommodation from hostels and backpackers resort to high end hotels. Please refer to travel booking websites for further accommodation options.

ARRIVING LATE

Please do not reserve a flight that arrives after your team's scheduled rendezvous time. If your flight is delayed and/or you miss the rendezvous, call Earthwatch Australia on +61 (0) 3 9016 7590 during office hours or call Earthwatch's 24-hour emergency hotline at +61 (0) 3 8508 5537 after office hours.

Participants who arrive late will need to organize their own travel to the project site. Any costs incurred due to late arrival (e.g. transportation, accommodation, meals) will be at the participant's expense.

DEPARTURE

LOCATION: Magnetic Island back to Townsville.

DATE:

Team 1: 05 May 2023

Team 2: 14 July April 2023

Team 3: 20 October 2023

TIME: 3:30 p.m. on Day 5

[arrive back in Townsville at ~4:30 p.m.]

NOTE: Early departures from the expedition are discouraged (except in cases of emergency), due to the logistical need to divert vehicles and the disruption to the field research and other participants. Any participant departing early will be required to sign an Earthwatch release form.

We can however, easily accommodate an early departure on the last day of the expedition (Day 5) to meet departing flights - please discuss this with Earthwatch in advance to allow us to make the necessary travel arrangements.

The departure point for the trip is the SeaLink passenger terminal in Townsville. If arranged in advance, we can drop participants at the Townsville airport, or a location within central Townsville city.

EXPEDITION PACKING LIST

WHAT TO BRING

EXPEDITION PACKING CHECKLIST

GENERAL

- This expedition briefing
- Your travel plans, rendezvous details, and Earthwatch's emergency contact information
- Photocopies of your passport, flight itinerary, and credit cards in case the originals are lost or stolen; the copies should be packed separately from the original documents
- Passport and/or visa (if necessary)
- Certification of vaccination (if necessary)
- Documentation for travel by minors (if necessary)
- **AUSTRALIAN RESIDENTS ONLY:** Please bring your Medicare card and (if applicable) your private health insurance and ambulance cover policy numbers

SNORKEL AND DIVE GEAR

NOTE: These items may not be available on the island and should be brought with you. There are dive shops on the island which might carry spare equipment although supply cannot be guaranteed at the last minute.

- Dive booties, thick soled for walking across the reef
- Mask
- Snorkel
- Fins
- Full wetsuit (long arms and legs).
For July trip, 3–5mm is recommended.
- Gloves
- Hood (optional, if you feel the cold).

FOR DIVERS:

- BCD
- Regulator

CLOTHING/FOOTWEAR FOR FIELDWORK

- Long-sleeved shirt or rash guard for sun protection on the boat, and to wear under wetsuit
- Warm wind/waterproof jacket
- Wide-brimmed hat
- Swimsuit(s)
- Sunglasses (polarized lenses are best)—neck strap recommended

CLOTHING/FOOTWEAR FOR LEISURE

- Shorts
- T-shirts
- Footwear for walking around the island (thongs, sandals or sneakers)
- Pajamas or other sleepwear (please see the temperatures anticipated on your team to determine how warm your sleepwear should be).

FIELD SUPPLIES

- Small daypack (large enough to hold below listed items)
- Dry-bag or plastic sealable bags (good for protecting equipment such as camera from dust, humidity, and water)
- Insect repellent spray
- Water bottle(s)
- Reef-safe waterproof sunscreen with SPF 30 or higher
- Beach Towel

BEDDING AND BATHING

NOTE: Sheets, pillows (and pillowcases) and towels are provided on this expedition. Team 2 will have cooler evening/overnight weather and participants on that team may wish to bring a blanket or a sleeping bag for additional warmth.

EXPEDITION PACKING CHECKLIST

PERSONAL SUPPLIES

- Personal toiletries (biodegradable soaps and shampoos are encouraged)
- Antibacterial wipes or lotion (good for cleaning hands while in the field)
- Personal first aid kit (e.g., anti-diarrhoea pills, antiseptic, itch-relief, pain reliever, bandages, blister covers, etc.) and medications
- Spending money

OPTIONAL ITEMS

- Torch or headlamp with extra batteries and extra bulb
- Earplugs for light sleepers
- Hardware for sharing digital photographs at the end of the expedition
- Travel guidebook
- Books, games, journal, art supplies, etc. for recreational/rest time and travel
- Water-resistant wristwatch

- Light travel towel for fieldwork
- Underwater camera, film/memory card(s), extra camera battery (if you bring a digital camera, bring your interface cables for downloading)
- Binoculars
- Pencil, pen, notebook
- Bathrobe
- Dive Computer or tables
- Visual dive safety signal (an inflatable “safety sausage”)
- Dive knife (preferably small and mounted on your body or equipment, as opposed to placed in a pocket)

NOTE: Do not bring more luggage than you can carry and handle on your own. If traveling by air and checking your luggage, we advise you to pack an extra set of field clothing and personal essentials in your carry-on bag in case your luggage is lost or delayed.

PROJECT STAFF

YOUR RESOURCES IN THE FIELD

EARTHWATCH SCIENTIST ASSOC. PROF. DAVID BOURNE holds a joint appointment at James Cook University and the Australian Institute of Marine Science (AIMS). Over the past four years his focus has been on developing a research, teaching, and research-training program around macro and micro ecology of coral reefs with a particular emphasis on benthic invertebrates such as corals which build the reef structure. This work extends to understanding how environmental degradation is and will further impact coral reefs globally. His training is in the area of molecular microbial ecology with a strong research focus on investigation of microbial diversity, structure and function in complex marine ecosystems. Although having a broad research profile around impacts on marine ecosystems and coral reefs in particular he has specifically focused research essentially into two areas, the first investigating the normal microbial communities associated with corals and their functional roles in maintaining coral fitness. The second research focus is to elucidate pathogens and mechanism of disease onset in corals and the implications this has on a stressed reef ecosystem in light of climate change being a major driver of coral reef degradation. **David is the Principal Investigator on Recovery of the Reef and will be present on all teams.**

EARTHWATCH SCIENTIST, HILLARY SMITH is a Research Officer at James Cook University focusing on coral biology and reef ecology. After completing her Masters in Marine Biology at James Cook University, her research has been focused on investigating the microbial communities of marine invertebrates, the functional genomics behind coral adaptation, and gene expression in response to stress and disease. Throughout this particular Earthwatch project she is testing local scale reef restoration techniques on the Great Barrier Reef including macroalgae removal ("sea-weeding") and coral larval enhancement ("coral IVF"). Prior to her career in science, she completed a Bachelor of Fine Arts and worked for several years in the arts. She has a passion for creating conceptual scientific illustrations to bridge the gap between science and art, and to communicate complex scientific ideas with beautifully rendered images.

NOTE: In addition, there will be various Research Assistants joining the expedition. A staffing schedule is still to be announced.

EMERGENCY NUMBERS

AROUND-THE-CLOCK SUPPORT

EARTHWATCH AUSTRALIA 24-HOUR EMERGENCY HELPLINE

+61 (0)3 8508 5537

EARTHWATCH'S 24-HOUR EMERGENCY HOTLINE

Call Earthwatch's 24-hour on-call duty officer in the U.S.:

+1 (978) 461.0081

+1 (800) 776.0188 (toll-free for calls placed from within the U.S.)

After business hours, leave a message with our live answering service. State that you have an emergency and give the name of your expedition, your name, the location from which you are calling, and if possible, a phone number where you can be reached. An Earthwatch staff member will respond to your call within one hour.

TRAVEL ASSISTANCE PROVIDER: ON CALL INTERNATIONAL

TEL: +1 603-952-2680 (collect calls/reverse charges accepted)

TOLL FREE FROM U.S. & CANADA: 1-833-819-2939

TEXT ONLY: +1-603-945-0103

EMAIL: mail@oncallinternational.com

You may contact On Call International at any time. They can assist in the event of a medical or evacuation emergency or for routine medical and travel advice, such as advice on visas and vaccine requirements.

MESSAGE FROM EARTHWATCH

DEAR EARTHWATCHER,

Hello and welcome to the team!

You will soon be embarking on an exciting and meaningful adventure to some of the most spectacular regions of our planet. It's a special place here on Earth, and with your help we are working hard to keep it that way for all life that exists.

We unfortunately face a variety of environmental pressures today and by joining this Earthwatch expedition you are not only saying you care, but more significantly, that you are prepared to do something about it. The work you will undertake will help contribute to solving critical environmental issues, help shape policies and behaviours and enhance protection of culture, wildlife and ecosystems. Without your help scientists would need to spend weeks, months or even years collecting the same amount of data you and your team will collect in just a few days!

We can't thank you enough for your choice to take a slightly different holiday this year, and we hope you get out of the experience as much as we do by bringing researchers and participants together to work towards a better future.

If you have questions as you prepare for your expedition, please contact our Earthwatch office. Thank you for your support, and enjoy your expedition!

Best regards,

Fiona Sutton Wilson
Earthwatch Australia CEO
